

Turn complex data into clear decisions.

We help leadership teams answer the questions that matter: where margin is going, which customers are at risk, what to do next. We build the AI-ready foundations and run the full stack, but the decision is always the deliverable.

WHAT WE DO

Executive & board reporting

Board packs, monthly reviews and leadership dashboards that show the position in minutes, so the meeting is spent on the decision, not the data.

Data platforms & modelling

Governed Microsoft Fabric lakehouses that consolidate every source into one canonical, hourly-refreshed model, consumed in Power BI, live Excel connections or AI tools; the same trusted numbers on every surface.

Power BI delivery & governance

End-to-end Power BI, from semantic models and DAX to a single, defensible version of the truth, built to Microsoft best practice.

AI-ready foundations

Clean, governed data that makes Microsoft Copilot and machine-learning forecasting reliable, rather than confident guesswork.

REPRESENTATIVE ENGAGEMENT

A national services organisation had migrated to **Microsoft Dynamics 365 Business Central**, but the board had lost confidence in the numbers. We built a governed **Microsoft Fabric** lakehouse over Business Central and Salesforce, feeding a **Power BI** platform across board financials, profitability, revenue, receivables and service delivery.

- **Month-end cut 67%**, from 15 days to 5, trusted numbers for the CFO.
- **Board confidence restored** through one canonical reporting layer: every number defined once, instead of forty plausible versions.
- **Profitability by site and by therapist**: retained margin, revenue per hour and billability down to each clinician, surfacing gaps and driving net profit uplift.
- **Reconciliations automated**: month-end accruals and revenue reconciliations run from the lakehouse, not manual workbooks.
- **Delivered-but-unbilled revenue** surfaced early through billing-lag and trading-day forecasting.

BACKGROUND

Streamline Analytics is the practice of SL Analytics Pty Ltd, founded in Melbourne in 2025 by Luke D'Anastasi, CPA, after analytics leadership roles at **Ventia**, **Judo Bank**, **Arrotex Pharmaceuticals**, **Flight Centre** and **Sensei Project Solutions**, spanning not-for-profit, government, FMCG and ASX-listed organisations.

WHY STREAMLINE

Boardroom and back-end

Certified practising accountants who spent years embedded in the IT teams of ASX-listed businesses.

The decision is the deliverable

We own the business outcome, not just the build, and lead teams through the messy middle to get there.

Tool-agnostic

Microsoft, AWS and the modern data stack, chosen to fit your decision, your team and your budget.

TECHNOLOGIES

Power BI

Microsoft Fabric

Databricks

DAX
